[Problem](#)[Submissions](#)[Leaderboard](#)

The merged array should also be sorted in non-decreasing order. Complete the function `mergeSortedArrays` that takes the following parameters:

`int arr1[n]`: the first sorted array `int arr2[m]`: the second sorted array Returns `int[]`: the merged sorted array

Input Format

The first line contains an integer `n`, the size of the first array. The second line contains `n` space-separated integers representing the first sorted array. The third line contains an integer `m`, the size of the second array. The fourth line contains `m` space-separated integers representing the second sorted array.

Constraints

$1 \leq n, m \leq 10^5$ $-10^9 \leq arr1[i], arr2[i] \leq 10^9$ Both arrays are sorted in non-decreasing order.

Output Format

Print the merged sorted array as space-separated integers.

Sample Input 0

```
4
1 3 5 7
4
2 4 6 8
```

Sample Output 0

```
1 2 3 4 5 6 7 8
```

Language

Java 15

```
58 public String lines = br.readLine();
4 59 public class Solution {
59     if (line3 == null) return;
41     public static void main(String[] args) throws IOException {
60         int m = Integer.parseInt(line3.trim());
61
62         int[] arr2 = new int[m];
63         if (m > 0) {
64             String[] tokens2 = br.readLine().trim().split("\\s+");
65             for (int i = 0; i < m; i++) {
66                 arr2[i] = Integer.parseInt(tokens2[i]);
67             }
68     }
69 }
```

```
68         } else {
69             br.readLine();
70         }
71
72         int[] result = mergeSortedArrays(arr1, arr2);
73
74         StringBuilder sb = new StringBuilder();
75         for (int i = 0; i < result.length; i++) {
76             sb.append(result[i]);
77             if (i < result.length - 1) {
78                 sb.append(" ");
79             }
80         }
81         System.out.println(sb.toString());
82     }
83 }
```
